

Alternate Trade Routes to the UAE

Given the ongoing regional situation and maritime disturbances, the UAE has adjusted the following contingency plans and viable routes for continuity of supply chain:

- i. **Operational Status at Jabel Ali Port:** The major port of the UAE, Jabel Ali having handling capacity of over 15 million TEUs per year across four terminals with 100 berths remains operational despite multiple challenges. As of the latest updates, Jebel Ali Port is facing a reduced inbound vessel traffic and significant disruption to sea routes via the Strait of Hormuz due to regional conflict. While infrastructure remains intact, most shipping carriers have suspended direct calls, prompting the alternative use of emergency land corridors from Fujairah or Khorfakkan.
- ii. **Shipping Lines and Freight Forwarders:** Most of the leading shipping lines and freight forwarders like Maersk, Hapag Lloyd, CMA CGM, MSC, One, Ever Green, Emirates Shipping, RCL, HMM, Merchant Lines, Baltic Lines, ACE Line, Wan Hai, Yang Ming, EMA Shipping, and COSCO have either suspended their operations completely or if they are accepting bookings, they are subject to imposition of additional surcharges in addition to a longer duration of cargo unloading at the ports of discharge. However, the feeder vessels are also being arranged to facilitate the business community in Pakistan.
- iii. **Alternative Ports of Khorfakkan and Fujairah:** After blockade of Strait of Hormuz, Dubai Customs and DP World have activated another temporary framework for shipments destined to Jebel Ali Port through the UAE's alternative ports of Khorfakkan and Fujairah. As part of the procedure, the containers arrive at these ports of first entry and are then moved by road through bonded trucking directly from Khorfakkan or Fujairah to Jebel Ali Port for customs clearance at Jebel Ali.
- iv. **Dubai Airport Operations:** Dubai's aviation showed operational resilience as Dubai International and Al Maktoum International airports ensured cargo flows continued keeping supply chains intact from multiple regional and international supplying markets including Pakistan. However, the rates of airfreight have increased by different airlines (Emirates, PIA, Fly Dubai, and Air Arabia) mainly due to hike in fuel prices.
- v. **Alternative route of Green Corridor:** Since the handling capacity of Fujairah and Khorfakkan ports is limited in the given large number of shipments, Dubai Customs has also recently notified the activation of a "green corridor" between Emirate of Dubai and Sultanate of Oman for sea and air shipment. This is the makeshift arrangement of transit trade from Omani Sea ports and Airports to Dubai's Jebel Ali and Airport. The initiative is designed to enhance the smooth flow of trade and strengthen supply chains between the two sides by introducing faster and more efficient customs procedures. Under the green corridor, *shipment data will be submitted in advance*, allowing goods to be cleared quickly upon arrival through approved channels under the green corridor framework.

vi. **Clearance procedure for Green Corridor**

initiative: Dubai Customs and DP World explain the procedure that the containers destined for Jabel Ali Port from rest of the World, which have been diverted to Omani Ports, shall be transported directly to Jabel Ali by bonded trucks with sealed containers with transit cargo declaration. The bonded trucks with sealed containers shall be transported to Oman's Al Wajajah border point under Omani Custom supervision and after crossing the UAE's Hatta border entry point to Jabel Ali for final clearance.
